1. Data Collection and Sampling

Sample Question Example

> A survey was conducted to find out the favorite sport among students in a school. A random sample of 50 students was selected, and their preferred sports recorded. Explain why using a random sample is important.

Predicted Answer

- Using a random sample reduces bias, ensuring that every student has an equal chance of being selected.
- It helps produce a representative sample of the entire student population.
- This improves the reliability and validity of the survey results.
- Random sampling supports generalization of findings to the whole population.

2. Measures of Central Tendency and Variability

Sample Question Example

> The ages of five participants are 20, 22, 24, 26, and 28. Calculate the mean and median ages.

Predicted Answer

- Mean: $(20 + 22 + 24 + 26 + 28) / 5 = 120 / 5 = 24$
- Median: Arrange data in order (20, 22, 24, 26, 28); median is the middle value = 24

3. Probability

Sample Question Example

> A bag contains 3 red balls, 5 blue balls, and 2 green balls. If a ball is drawn at random, what is the probability that it is blue?

Predicted Answer

- Total number of balls = $3 + 5 + 2 = 10$
- Probability (blue) = Number of blue balls / Total balls = $5 / 10 = 1/2$

4. Data Presentation and Interpretation

Sample Question Example

> The table below shows the number of hours studied and corresponding test scores for five students:

| Hours Studied | Test Scores |

|-----|-----|

| 2 | 50 |

| 3 | 55 |

| 4 | 60 |

| 5 | 65 |

| 6 | 70 |

Plot a scatter diagram and interpret the relationship.

Predicted Answer

- Plot each pair of data points on a graph with hours studied on the x-axis and test scores on the y-axis.
- Likely observation: There is a positive correlation; as hours studied increase, test scores tend to increase.
- This suggests a linear relationship between hours studied and performance.
