- Draw meaningful conclusions about the company's financial position
- Make informed recommendations for improvement

Types of Ratios Used in MBA Project Reports

Ratio analysis can be broadly categorized into several key types, each serving a specific purpose:

1. Liquidity Ratios

Evaluate the company's ability to meet short-term obligations.

- Current Ratio = Current Assets / Current Liabilities
- Quick Ratio (Acid Test Ratio) = (Current Assets - Inventory) / Current Liabilities

In your report: Analyze trends to evaluate operational efficiency and profitability growth, supporting strategic insights.

4. Efficiency Ratios (Activity Ratios)

Indicate how effectively assets are utilized.

- Asset Turnover Ratio = Revenue / Total Assets
- Inventory Turnover = Cost of Goods Sold / Average Inventory
- Receivables Turnover = Net Credit Sales / Average Accounts Receivable
- Payables Turnover = Purchases / Average Accounts Payable

In your report: Highlight operational efficiency, working capital management, and areas needing improvement.

5. Market Ratios

Reflect investor perceptions and market performance.

- Earnings Per Share (EPS) = Net Income / Number of Outstanding Shares
- Price to Earnings (P/E) Ratio = Market Price per Share / EPS
- Dividend Yield = Dividends per Share / Market Price per Share
