Question 1: What is the primary function of the respiratory system?

Answer: The primary function of the respiratory system is to facilitate gas exchange, bringing oxygen into the blood and removing carbon dioxide from the body.

Question 2: Name the three types of muscle tissue and give a brief description of each.

Answer:

- **Skeletal muscle:** Voluntary muscles attached to bones, responsible for movement.
- **Cardiac muscle:** Involuntary muscle found in the heart, responsible for pumping blood.
- **Smooth muscle:** Involuntary muscles found in walls of internal organs, controlling movements like digestion.

Question 3: Which bones make up the human skull?

Answer: The human skull is primarily composed of the cranial bones (such as the frontal, parietal, occipital, and temporal bones) and the facial bones (like the maxilla, mandible, nasal bones, etc.).

Question 4: How does the circulatory system maintain blood pressure?

Answer: The circulatory system maintains blood pressure through the pumping action of the heart, the elasticity of arteries, and the regulation of blood volume via hormonal control mechanisms.

Question 5: Describe the pathway of air from the nose to the lungs.

Answer: Air enters through the nose, passes through the pharynx and larynx, moves down the trachea, then through the bronchi, and finally reaches the alveoli in the lungs where gas exchange

occurs.
