Core Concepts in Pathology According to Robinson

Cell Injury and Cell Death

Cell injury is the initial event in most disease processes. Robinson details various types of cell injury, their causes, morphological features, and outcomes, including:

- Reversible injury: Cell swelling, fatty change, and loss of microvilli
- Irreversible injury: Necrosis and apoptosis

Understanding these mechanisms is vital, as they form the basis for many pathological conditions. The book emphasizes that persistent or severe injury leads to cell death, which can be necrosis or apoptosis, each with distinct morphological and biochemical features.

Mechanisms of Cell Injury

Cell injury results from various factors, such as:

- Hypoxia or ischemia
- Physical agents (trauma, burns)
- Chemical agents and drugs
- Infectious agents
